

[illegible]

1. A method, comprising:
 - defining a source associated with data, the data stored in a structured environment and mapped to the source to enable retrieval thereof, wherein the source includes a source business object, a source business component, and at least one source field;
 - defining a destination to enable the data to be mapped thereto, wherein the destination includes a destination business object, a destination business component, and at least one destination field; and
 - mapping the data stored in the structured environment to the destination to enable retrieval thereof, the data remaining mapped to the source.
